## RC PRO
Utility Mount

User's Manual

by Thor's Drone World

Content

A. LifThor RC PRO Utility Mount
B. 2 x thumb screws M4
C. ¼"-20 Knob screw
D. Hex Key & Wrench
E. HDMI – Mini HDMI 4K High Speed cable (30cms)
F. Adjustable Quick Release StrapThor Lanyard
G. LifThor protection / carrying bag

How to mount:

Unscrew the back of the mount and remove the back piece of the mount as shown.

front

back

Align the controller with the mount's front plate to get access to the controller's mounting points.

Secure the controller in place with the (2x)M4 thumb screws provided. We recommend to place both screws before tightening them to maintain the alignment.

Apply pressure with your thumb to secure the lower frame to install the back of the mount, make sure the mount is properly aligned and has a tight grasp of the controller. It's recommended to extend the RC's antennas for better access.

Without releasing the pressure of your fingers. Secure the mount in place with the wing bolt provided. – Congratulations! You have successfully mounted your LifThor RC PRO utility mount.

bolt

Set up the StrapThor Lanyard

Unplug the Quick Release adapter from the lanyard by pressing firmly on the sides.

Loop the string through the LifThor SC PRO utility mount and pull to secure, reconnect it to the lanyard.

Utility mount

Care for a more adjustable & extremely balance lanyard system, then check out our [LifThor KRAKEN upgrade](#) for RC PRO

How to mount an additional monitor (or any other utility / device)

Slightly screw the ¼"-20 knob to the monitor (or any other utility) and slide it from the back through the opening of the utility mount, once in place secure the knob screw.

Utility mount

To fix the angle of the monitor use the provided hex key & wrench to adjust accordingly to your needs.

The LifThor RC PRO is equipped with a built-in mounting point located on the bottom of the unit to mount it to a tripod.

Use the LifThor bag to store your DJI Smart Controller & LifThor Pro
